CHEM 23201
Extra Credit

Here is an overview of what is needed to get up to 5% extra credit.

Big picture: add 1 to 5 facts or pieces of information to the Wikipedia article on your compound with appropriate citations on or before Nov 13. Then look at the page between Dec 11-14 to see how many of them are still on the page as entered on or before Nov 13. That number determines how much extra credit you get.

For example: Let’s say you add 4 facts or pieces of information on Nov 13 and on Dec 12 you check the page and 3 of the facts or pieces of information are unchanged then you will get extra credit of 3%.

Procedure:
1. Print the Wikipedia article before you add your facts or pieces of information.

2. Add your facts or pieces of information with appropriate citations. Rewording or rewriting a sentence or supplying a citation to an existing sentence or fact is not adding facts or pieces of information but it is being a good Wikipedia citizen. Adding synonyms would be just one fact even though you might add five synonyms.

3. Print the Wikipedia article after you have added your facts or pieces of information. Highlight and Number what you added to the article. If you add more than five facts or pieces of information then you must select what will be your five.

4. Then click on the History tab for the article and print the page of the most recent updates to the page. Highlight the date/time(s) you updated the article.

5. Hand in the pre and post printouts and the printout of the history tab on or before Nov 13.

7. Sometime between Dec 11-14, print the Wikipedia article then click the history tab for the article and print the history page of the most recent updates. Highlight your unchanged facts/information.

8. Hand in the printout of the article and of the history tab on or before Dec 14.

Good luck.
